 **You May Not Be Anonymous!** You have disabled Javascript, which is good. However, it prevents this website from checking for other potential vulnerabilities in your browser's configuration. TorK and the AnonymityAnywhere LiveCD configure your browser to ensure the features below are disabled for safe, anonymous browsing -so this page is the best result you will get! For your own benefit you should inspect your browser settings as advised below. You can even re-enable Javascript to get a full test. Be sure to disable Javascript again once everything else is configured properly.

Note: TorK sends you to this page before letting you loose on the internet so that you can check your browser is not exposing your identity while using Tor. If you visited this site with TorK you should have seen a connection to this server being made in the 'Anonymous Traffic' window. That is enough to tell you that you are using the Tor network to read this page.

document.write(" as your browser on a "); document.write(" machine with an ");  **Malicious websites can use it to break your anonymity, even when using Tor.**

 **Cannot Determine If You Have Cookies Installed** Javascript is disabled, so I cannot tell if you have cookies installed. Enable Javascript on your browser to run this test. Remember to disable Javascript again before browsing anonymously.

 **Cannot Determine If You Have Java Installed** Javascript is disabled, so I cannot tell if you have Java installed. Enable Javascript on your browser to run this test. Remember to disable Javascript again before browsing anonymously. However, if you can see an IP address below then Java is indeed installed:
 <APPLET CODE="MyAddress.class" WIDTH=500 HEIGHT=14> <div NAME="TEXT" VALUE="Your IP Address is: " class=""></div> You do not have Java enabled. </APPLET>

 **Cannot Determine If You Have Plugins Installed** Javascript is disabled, so I cannot tell if you have Plugins installed. Enable Javascript on your browser to run this test. Remember to disable Javascript again before browsing anonymously.
